

Dear Sirs:

I would like to see band segmenting on this new band, if possible, since I am a CW operator predominantly. A narrow portion of the bottom of the band would be well suited for this purpose. I'd hate to see the whole band open to wide band emissions. All the other amateur bands have segmentation except for 160 meters and there have been problems on that band with SSB operators sitting in the "gentleman's agreement" portion of the band allocated for narrow band emissions.

If possible, please consider some form of segmentation.

Thank you for your consideration.
